SELECTED PROJECTS

Present

Decentralized Identity Wallet — Full-Stack Proof of Concept

- Built an end-to-end decentralized identity wallet: Java 21/Spring Boot backend exposing JSON APIs via Jackson, React/TypeScript frontend, and PostgreSQL for identity and credential persistence.
- Implemented QR-based identity verification using ZXing.
- Containerized and deployed on Kubernetes with a GitHub Actions CI/CD pipeline (.github/workflows/ci.yml) automating build, test, and deployment.

Present

Flowgenix-AI — Multi-Agent GenAI System

The Hashgraph Group, for EcoGuard

- Led product for a 9-agent GenAI system that digitizes carbon-credit methodology documents into executable workflows, cutting carbon-reporting onboarding from 4–5 months to 1–2 days (~98% faster).
- Orchestrator-driven, two-phase pipeline with human-in-the-loop checkpoints: document parsing (Docling, chunking/embedding, structured model of processes, eligibility rules, and formulas) feeding specialist generator agents that produce BPMN workflows, form schemas, validation rules, lookups, a calculation engine, and DMN decision tables.
